Voortgangsrapportage

Commissienummer	CEN/TC156	1^e aanspreekpunt NL: Jaap Hogeling
Titel commissie	Ventilation for Buildings	

Voortgang:

An amendment to EN 16798-5-1 is on its way.

The ad hoc group for the joint working group between CEN/TC 156/228 on heat pumps has started again. There is the intention to amend EN 16798-13 on Calculation of cooling systems – Generation, this also will make a connection to the heat pump standard of CEN/TC228.

This is important as not all countries take over EPB standards, for example HP standard from TC228 : EN 15316-4-2, which is related to heating, not cooling. The countries therefore create their own cooling part. This is not helping European standardization.

This is exactly the topic and reason for the revision of EN 16798-13, there should indeed be a link to EN 15316-4-2

WG20:

Revision of EN16798-3 Energy performance of buildings — Ventilation for buildings — Part 3: For non-residential buildings — Performance requirements for ventilation and room-conditioning systems (Modules M5-1, M5-4) is on its way.

Two new informative annexes are being proposed: Annex C National Data for Design Criteria — Default choices and Annex D: Recirculation and secondary air filtration quality to reduce airborne pathogens.
